Kings of Sweden, Norway and Denmark Meet to Agree on Mutual War Policy

1. KING GUSTAV OF SWEDEN, 2. KING HAARON OF NORWAY, 3. KING CHRISTIAN OF DENMARK

By invitation of King Gustav of Sweden, King Haakon of Norway and King Christian of Denmark agreed to visit him at Malmö, southern Sweden, on December 17 and 18. The three kings arrived to be accompanied by their ministers of foreign affairs and secretaries of state to discuss matters of common interest which have arisen as a result of the war and especially measures for helping the economic situation in Scandinavia.

The school teachers of this place who are attending institute at Uniontown this week are Misses Josephine Moore, Katherine Brown, Edna Moore, Elizabeth Brown, Ruth Brown, Mary Brown, Mrs. Brown, Olive Brown, Garrett Brown and Mrs. Brown.

OPPORTUNITY FOR U. S. COAL MEN IS SHOWN BY PARKER

Geological Survey Expert Describes Existing Conditions.

RICH FIELD IS NOW AT HAND

Americans, However, Must Offer Their Best Coal to Win It; Shows Wisdom of Utilizing the Export Business, but Shows How It May Be Done

One of the most interesting papers read before the Coal Mining Institute of America at its recent meeting in Pittsburgh was that of H. W. Parker, Geological Survey expert, "The Foreign Market for American Coal." In Parker's paper the subject is exhaustively treated. He does not entirely approve the wisdom of sending the best American coals into the export trade, but shows what markets are open for the coal from this country, and what must be done to win them. His paper follows:

At the present time the world is producing coal at the rate of about 1,500,000,000 short tons a year. This production is being distributed in such a manner that the world has an annual production of a quantity of a billion and a half tons.

Of this great tonnage, more than ninety-eight per cent is produced in the continents of North America, Europe and Asia, and less than two per cent, or approximately 250,000,000 tons, is from the countries of South America, Africa and Oceania, which lie south of the equator. The reason for the much more important status of the northern hemisphere as a coal producer may be readily appreciated when one looks at the estimates of the world's coal supplies as presented before the International Geological Congress at Ottawa, Canada, last year. North America has about 1,000,000,000 tons of coal, Europe has about 1,000,000,000 tons, and Asia has about 1,000,000,000 tons. South America has about 100,000,000 tons, Africa has about 100,000,000 tons, and Oceania has about 100,000,000 tons.

The estimate presented at the congress shows that the total coal reserves of the world amount to about 7,000,000,000 short tons, of which about 2,500,000,000 short tons are in North America, Europe and Asia, and about 4,500,000,000 short tons are in South America, Africa and Oceania. This shows that the coal reserves of the northern hemisphere are about 10 times as large as those of the southern hemisphere.

It needs no complex rule of mathematics to show that the coal reserves of the northern hemisphere are about 10 times as large as those of the southern hemisphere. The coal reserves of the northern hemisphere are about 10 times as large as those of the southern hemisphere. The coal reserves of the northern hemisphere are about 10 times as large as those of the southern hemisphere.

North America is credited with more than two-thirds of the total reserves of coal in the world. The coal reserves of North America are about 1,000,000,000 short tons, which is about 10 times as large as the coal reserves of South America, Africa and Oceania.

Considering the quantity of coal

CONGRESSMAN KAHN A MILITANT OF THE FIRST MAGNITUDE

REPRESENTATIVE JULIUS KAHN

Congressman Julius Kahn of California, does not propose to allow Congressman Gardner of Massachusetts to be the "whole thing" in the matter of mining in the national defense. For two or three years Congressman Kahn has been speaking in favor of the coal industry, and has been a militant of the first magnitude in the subject of military preparation.

On hand, Great Britain has been by far the largest producer of coal, and until it was exceeded by the United States in 1913, was actually the leading coal producer in the world. In 1913, Great Britain produced 21,575,511 short tons of coal, which was 21.5 per cent of the total production.

Germany has not been and probably will not be, an appreciable factor in the world's coal production, except as to her trade with her own dependencies and the supplying of her own navy and merchant marine.

Great Britain's production with her coal has had much to do with making her the greatest maritime country in the world, and the greatest creditor of the world. But the new beginning to feel the pinch of poverty in connection with her coal supplies, and it would not be surprising if, when the present war is over, Great Britain should find her coal reserves to the needs of her navy and her merchant marine.

In what other countries then, than the United States are those countries in which coal is produced in such quantities that they can look for their future coal supply?

It does not appear that the United States has any reason to fear a shortage of coal for many years to come. Some countries, in fact, have a surplus of coal, but these are the countries of Europe, Asia, Africa and Oceania, which are the countries of the southern hemisphere.

Central America

How much of this was to Great Britain's own coal production is not possible to say, but it is interesting to note that eighty per cent of her exports of coal went to Continental Europe. Of this, France took 19,190,219 long tons (11,112,822 short tons); Italy, 5,180,208 tons (10,281,822 short tons); Germany, 8,234,861 long tons (19,022,248 short tons); and Russia, 4,916,611 tons (10,281,822 short tons). This export of coal to South America was 6,477,238 long tons (7,254,507 short tons) to Central America, forty-seven tons (fifty-three short tons), and to Africa 4,825,654 tons (5,401,732 short tons).

The exports of bituminous coal from the United States in the fiscal year ended June 30, 1913, amounted to 16,883,101 long tons, distributed by continents as follows:

Other countries in North America... 11,877,291 long tons; South America... 411,208 long tons; Europe... 475,113 long tons; Africa... 25,570 long tons; Oceania... 25,570 long tons. It will be noted that of the total exports of 16,883,101 long tons, only 1,200,000 tons were sent to other continents than North America.

Our export trade in bituminous coal while still small when compared with that of Great Britain, has shown a decided growth in the last few years. It has increased from less than 1,000,000 long tons in 1908, to nearly 1,500,000 long tons in 1913, a gain of nearly 50 per cent in five years. Naturally during the continuance of the war there will be an increasing demand for American coal, probably as much of a demand as we can find vessels in which to send it, for at this time in our history has the fleet of American vessels been so forcibly thrust upon us as at the present juncture. I recently observed a list of 21 vessels that had cleared with load from Baltimore and Hampton Roads.

Germany has not been and probably will not be, an appreciable factor in the world's coal production, except as to her trade with her own dependencies and the supplying of her own navy and merchant marine. Great Britain's production with her coal has had much to do with making her the greatest maritime country in the world, and the greatest creditor of the world.

In what other countries then, than the United States are those countries in which coal is produced in such quantities that they can look for their future coal supply? It does not appear that the United States has any reason to fear a shortage of coal for many years to come.

Some countries, in fact, have a surplus of coal, but these are the countries of Europe, Asia, Africa and Oceania, which are the countries of the southern hemisphere.

Central America

COKE CONTRACTS FOR 1915 FAIRLY WELL CLOSED UP

200,000 Tons Practically
Sold and 50,000 Tons
Still Open.

REQUIREMENT COKE CONTRACTS

Not Regarded Favorably by Operators
Who See in Them Not End of Season
Movement in Prompt Coke Is Slow
Less Activity in 1914 Iron Trade.

From The Weekly Courier.
PITTSBURGH, Dec. 16.—Two additional furnace coke contracts have been closed in the past few days, each involving 100,000 tons a month or a little more, and bringing the total business closed on this movement to approximately 100,000 tons. The situation made a week ago involved a total of between 70,000 and 80,000 tons. Of the latest contracts closed one was for six months, while the other appears to have been for the full year. Both were at flat prices, the price over the year being higher than the price over six months.

There remains in the market, according to the summaries in the local papers, quantities involving about 100,000 tons a month. In fact total there is an estimate of 60,000 tons a month for the Youngstown Sheet & Tube Company, leaving about 40,000 tons a month for four or five other interests, and some of this latter is regarded as closed all but the arranging of some minor details that may or may not prove troublesome. As to the Youngstown business, there is a rumor that it has been closed with satisfactory results, the same interests that have had the business the past year, but this rumor has not been confirmed.

It is estimated that the contracts expiring at the end of this month, and another which shipments are to begin, total about 250,000 tons a month or possibly a shade more, as that with about 100,000 tons closed and about 100,000 tons under active negotiation there is about 50,000 tons not heard from. This, of course, does not include the large amount of possible consumption that would arise from the furnace going into blast. The business centered up is only business that is now in business. In ordinary times furnace coke is sold on a contract basis, when they are out of blast, expecting to get into blast shortly and making the "requirement contract" that used to prevail generally in the coke trade. The operators have so often cut the coke when it is out of blast, that the requirement contracts that such arrangements are in general use, as common as they were. At this particular time, a requirement contract is out of the question, from the coke seller's standpoint. If the furnace ceases to make it is out of blast. Such a furnace would presumably not go into blast and take the coke unless general conditions should improve materially, but in such a case the operator would doubtless be able to sell the coke at a price that would be higher than the requirement contracts being closed on a hard times basis as to price and the contract has no attraction whatever unless it provided for the immediate operation of events.

Prices have shown no general trend upwards or downwards during this contractive movement. At the outset the situation was that prompt coke was \$1.50 and the operators that were really trying to sell, endeavored to obtain \$1.75 for first quarter delivery only, regarding a sale at this price for first quarter only as a much more desirable transaction than one at the same price for the half year, while to sell for the entire year at \$1.75 was regarded as out of the question. As negotiations progressed this position has had to be abandoned, through a modification either of the price or the period of delivery. It is even a question whether \$1.75 has always been obtained for delivery over the whole year, though it certainly has been obtained for the second half. The buyers set out to obtain forward deliveries at only a very small advance over the prompt market, and as a rule the contracts closed have represented a compromise at points about midway.

The prompt market remains at \$1.50, with very little activity. The middle of the month having been reached, operators are not particularly desirous of selling over the remainder of the month at this figure, as a price slipping during the holidays is usual. The market as a whole is quotable as follows:
Prompt furnace \$1.50
Contract furnace, 1st half, \$1.75
Contract furnace, 2nd half, \$1.75
Contract furnace (annual), \$2.25
Contract furnace (annual), \$2.50

The pig iron market has been quiet locally, and in other districts there seems to be less activity, though sales from day to day are undoubtedly larger than a month or six weeks ago, before the recent buying movement started. The American Steel Foundries has bought 7,500 tons of basic iron in addition to the 15,000 tons taken recently and already reported. The furnace being for Shuman and Alliance, at \$12.75 delivered. The market remains quotable as follows:
Bessemer, \$12.75; basic, \$12.50; No. 2 foundry and malleable, \$12.75 to \$13.00; gray iron, \$12.50 to \$12.75; all at Valley furnace, 25 cents higher delivered. Some furnaces outside the Valley would probably sell foundry at \$12.50 to \$12.75 delivered Pittsburgh.

Mines More Active
Activity in mining is noticeable in the Monongahela valley, particularly at Friends where the additional mines have gone to work.

Mills Run Fairly Well
The steel mills of the Youngstown district are operating at about sixty-five per cent. of capacity.

THE STEEL SITUATION INDICATES IMPROVEMENT

Increased Bookings and Promise of
50% Operating in January.

From The Weekly Courier.
NEW YORK, Dec. 16.—The American Metal Market and Daily Iron & Steel Report will review the metal market tomorrow as follows:
Nearly all the steel mills are receiving a larger volume of actual shipping orders than a fortnight or a month ago. In some instances the bookings in this date in December are 20 to 50% in excess of those in the same period in November and in no instance has business fallen off. There is no increase sufficient to speed up the mills, which continue operating at an average of about 25% of capacity. There will be some extensive closing over the holidays. Operations may be up to a 50% rate by the middle of January.

The Steel Corporation's loss of 126,000 tons in unfulfilled obligations during November follows an October loss of 326,000 tons, and December will probably show a material gain. An interesting and significant fact is that shipping orders are being received even now from buyers who will receive the material just before January 1st and will therefore have to include it in their inventories, indicating an unprecedented shortage in stocks. Usually the orders are so engineered as to make stocks take a special dip at the inventory date.

Finished steel prices are, if anything, steadier than a week ago. Prices and shapes in the General West are firm at 1.50c Pittsburgh for immediate specification, or at any rate for specification prior to January 1st. The October statistics show iron and steel exports of \$17,000,000, or more than the average monthly rate in the first half of the year, and a gain of more than 50% over September.

Between two-thirds and three-fourths of the season contracting in big plate is now accomplished, and at an average level closer to the announced basic price than has obtained in the season now closed. The recent strength in pig iron has doubtless helped the sellers of the plate.

The scrap market at Pittsburgh shows a much stronger tone, with prices quoted higher on melting steel grades.

OLD FARM WHISKEY

"It Hits the Spot"
Discriminating men choose this whiskey because of the delightful mellow flavor, produced by the pure, spring water and the sun-ripened rye, the exquisite bouquet and the careful aging. Once chosen it is always used. Bottled in Bond, from charred oak barrels.
West Overton Distilling Company, Scottsdale, Pa.

WRIGHT-METZLER GIFT THINGS

EASY TO BUY, SAFE TO GIVE, SURE
TO BE APPRECIATED

Shopping Hours

THIS WEEK

Store Open until 6 P. M.;
Saturday evening 10 P. M.

NEXT WEEK

Mon., Dec. 21, open until 9 P. M.
Tues., Dec. 22, open until 9:00
Wednes., Dec. 23, open until 9:00
Thu., Dec. 24, open until 10 P. M.

Bath Robes \$5.
